

Hygi.

Unique. Layered. Recoverable.

Digital hygiene taught in 22 five-minute lessons — now rebuilt on NIST SP 800-63B-4 and CISA phishing-resistant MFA guidance, with the evidence for every lesson cited in the app.

THE PROBLEM

Nobody lacks security advice. They lack advice they'll finish — and advice that isn't out of date.

Compliance training is long, jargon-heavy, and measured by a completion checkbox. Worse, much of the password advice still circulating contradicts current federal guidance.

Built for audits

Long modules and a checkbox as the only measure. Nobody remembers module 4.

Written in jargon

'Phishing-resistant authenticator' means nothing without a plain-language definition.

Often obsolete

Forced 90-day rotations, complexity rules, and 'SMS is strong' are still taught everywhere.

THE INSIGHT

Advice becomes habit in five-minute pieces with immediate proof you understood it.

5 min

per lesson

1

mini-quiz

1

badge

22

then a trophy

- Short session, plain language, retrieval practice, visible reward — that loop is the whole product.
- Every quiz answer is followed by an explainer and a 'Review this lesson' link back to the exact section.
- One memorable spine now runs through all account-security teaching: Unique. Layered. Recoverable.

THE PRODUCT

22 lessons, 7 pathways, 73 quiz questions, 78 glossary terms.

Lessons, any order

22 lessons across 7 themed pathways: Foundations, Accounts & Identity, Scams, Devices & Workspaces, Home Network & Data, Privacy & Footprint, Safety & Response.

Mini-quiz + badge

73 questions with an explainer for every answer, a badge per lesson, and the Digital Hygiene Champion trophy at 22.

Glossary in three layers

Plain wording, tap-or-hover definitions on jargon, and a full 78-term Digital Safety Glossary.

Five-Door Reset

A new interactive exercise: pick your five highest-stakes accounts and harden each one — unique passphrase, passkey or app-based MFA, recovery codes, session review.

Evidence behind this lesson

An expandable panel on each lesson links the specific NIST, CISA, or university source the guidance came from.

Scoped AI helper

Hygi Helper answers course, glossary, and guide questions only — and is explicitly blocked from repeating obsolete password advice.

WHAT'S NEW SINCE V1

The account-security curriculum was rebuilt on 2025-26 guidance.

Same product, same five-minute format — modernized content and a citation trail.

Protect Your Accounts, rewritten

One lock per door, 15+ character passphrases, no composition rules, no calendar rotation, passkeys first, and a tiered MFA ladder.

Lock Down Account Access

A dedicated recovery unit: recovery codes, active sessions, connected apps, SIM-swap risk, and verification-code safety.

Sources now per-lesson

NIST SP 800-63B-4 (July 2025), CISA Phishing-Resistant MFA, Secure Our World, and Project Upskill cited inline.

WHY IT WORKS

Four mechanisms do the work.

Short sessions

Five minutes fits a break.
Finishing is the default,
not the exception.

Retrieval practice

Quizzes aren't scoring.
Answering then reading
why builds recall.

Plain language

Every jargon term is
tappable, so nobody
stalls on vocabulary.

A reason to return

Badges, the trophy at 22,
and shareable result
cards — sharing always
optional.

CREDIBILITY

Adapted from published university and federal guidance — every source cited in the app.

Hygi. is not affiliated with or endorsed by these institutions. We changed the format, not the recommendations.

WHO IT'S FOR

Three audiences, one product.

Universities & IT helpdesks

Their own published guidance, in a format students and staff actually complete.

Small businesses & nonprofits

Awareness training with no LMS, no seat licences, and no budget line.

Individuals & families

Free, installable to a home screen, no account required to learn anything.

MEASUREMENT

We can prove learning, not just visits.

- Install-to-home-screen funnel, onboarding starts, and quiz completions by day and by lesson.
- Per-lesson pass-rate trends, most-missed questions, most-tapped glossary terms, result-card shares, and trophies.
- Referring-domain attribution ties backlink gains to onboarding and quiz completion.
- All of it anonymous, aggregate, and off until a learner explicitly opts in. Progress stays on the device.

WHAT'S BUILT

This isn't a concept deck.

22

lessons live

78

glossary terms

7

pathways

6

source institutions

Learner side

Lessons, quizzes, explainers, badges, trophy, glossary, Five-Door Reset, share cards, scoped AI helper, installable PWA.

Operator side

Admin dashboard, per-lesson metrics, backlink monitoring with risk scoring and alerts, weekly SEO scans, role-based access.

Compliance side

Accessibility-audited, privacy policy, terms, accessibility statement, account deletion, consent banner, Play/App Store listing ready.

ROADMAP

From personal habit to organizational program.

Every step reuses the same lesson, quiz, and evidence engine.

Next

Cohort invites, group progress, pathway certificates, email nudges.

Then

White-label curriculum, LMS/SSO handoff, localization.

Later

Phishing-simulation practice and refresh cycles tied to missed-question data.

THE ASK

Pilot Hygi. with one cohort this quarter: 25–100 people, four weeks.

What we need

One department, class, or team — and a four-week window.

What you get

Your guidance in Hygi.'s format, plus a completion and pass-rate report.

Setup

A link. No install, no LMS integration, no data collection beyond anonymous opt-in metrics.

Try the lessons yourself.

Then tell us which cohort should go first.
